

Hawk Falcon™

Cellular-based control perfect for phone line replacement

FEATURES:

Affordable

Cellular-Based

Internal Rechargeable
Lithium-Ion Battery
(backup during power fail)

120VAC power and inputs

Entirely Selc-Contained

Three Inputs

Three Outputs

MQTT Support for
IOT Applications

The Hawk Falcon™ is an affordable all-in-one solution for connecting inputs and outputs in your control application.

In simplest terms: it wirelessly separates a relay's coil from it's contacts.

The Hawk Falcon™ supports three inputs and three outputs. Each input is wirelessly coupled to the output of the paired device and visa versa.

The Hawk Falcon™ is a cellular-based device that can receive and send 1/0 signals near instantly, removing the need for an expensive wired connection between devices.

Additionally, multiple Hawk Falcons™ can be interconnected, allowing one device's inputs to connect with other devices' outputs.

Applications

- Line Passer
- Replace Site-to-Site leased phone lines
- Remote Control of Inputs and Outputs
- Conduit-less Control Wiring
